

MAKING SENSE OF ATTENTION PROBLEMS

NATURAL SOLUTIONS TO A PERPLEXING PHENOMONON WITH GORDON NEUFELD PH.D

“There are many kinds of attention problems, most deeply rooted in emotional and developmental dynamics. In this four hour course, participants will gain an understanding of how the attentional system develops and what can go wrong and why. Participants will also learn to differentiate between three basic kinds of attention problems that can all lead to an ADD diagnosis. The ultimate objective of the course is to provide the participants with strategies for addressing the roots of the attention problems in such a way that the symptoms abate, regardless of their underlying cause.”
